SUMMARY

Third year Information Technology student, with a solid foundation in backend development. I have experience building products using the Spring Boot framework. I am actively looking for opportunities to study and work as a Backend Developer, with the long-term goal of becoming a Full-Stack Developer.

SKILLS

- **Frontend:** Angular.
- **Backend:** Spring Boot(Spring Security, Spring Data JPA, Hibernate).
- **Program Languages:** C/C++, Python, JavaScript, Java.
- **Database:** MySQL, SQLite, Supabase.
- **Tool&AI:** Docker, Git, Postman, Vercel.
- **Other:** Gitlab CI/CD, Networking, Linux(basic).

PERSONAL PROJECTS

Airline Ticket Sales Platform - Backend Service

Sep 2025 - Nov 2025

The Airline Ticket Sales Platform backend service is designed to support comprehensive operational and customer workflows. It enables administrators and management staff to maintain core data entities, including airlines, flights, aircraft, reservations, tickets, passengers, users, and payments. For authenticated users, the system provides a full range of sales features, allowing them to efficiently search for flights, book tickets for multiple passengers across different cabin classes, utilize various payment methods, manage refunds, and receive digital tickets. Furthermore, the system enforces strict, role-based authorization protocols to secure sensitive resources for Administrators, Managers, Sales Staff, and Customers.

Technology Stack:

- Framework/ Core: Spring Boot, RESTful APIs.
- Data Persistence: MySQL, Spring Data JPA, Hibernate.
- Security: Spring Security, JWT.
- Testing: MockMVC, Testcontainers.
- Deployment: Docker.
