SUMMARY

Fourth-year Information Technology student with a strong foundation in **Backend Development**, specializing in **Java and Spring Boot**. Experienced in building RESTful APIs, authentication and authorization using **Spring Security, JWT and OAuth2**, and database-driven applications. Hands-on experience with **Docker, GitLab CI/CD, Linux, Bash and Networking**. Seeking a **part-time Backend Intern** position to apply backend development experience while developing skills in CI/CD, containerization, automation and system operations.

EDUCATION

Hanoi University of Civil Engineering – HUCE
Engineer of Information Technology
GPA: 3.15/4.00

2023–Present

CERTIFICATIONS

TOEIC: 700

TECHNICAL SKILLS

DevOps: Docker, Docker Compose, GitLab CI/CD, Git, Linux/Ubuntu, Bash, Networking, CI/CD

Backend: Java, Spring Boot, RESTful API, Spring Security, OAuth2, JWT, Spring Data JPA, Hibernate

Frontend: Next.js, React, TypeScript, JavaScript, Tailwind CSS

Database: MySQL, MongoDB, SQLite

Testing: MockMVC, Testcontainers, Postman

Programming: Java, Python, C/C++, TypeScript

Others: Trello, Antigravity, Codex

PROJECTS

Airline Ticket Sales Platform – Full-Stack Application

2026

- Developed an aviation booking platform using **Java, Spring Boot, RESTful APIs** and **Next.js**, supporting flight search, booking, passenger management and user account workflows.
- Implemented authentication and role-based authorization using **Spring Security and JWT**, supporting customer and administrative access across the application.
- Built authenticated user profile management with **Next.js, TypeScript and REST APIs**, including personal information updates, password changes, client-side validation and authentication-state synchronization.
- Designed persistence using **MySQL, Spring Data JPA and Hibernate** for flights, bookings, passengers, tickets, users and payment-related data.
- Implemented API and integration testing with **MockMVC and Testcontainers** and containerized application services using **Docker**.
- Practiced deployment and development workflows with **Git, GitLab CI/CD, Docker Compose and Linux**, troubleshooting environment variables, networking, ports and service dependencies.
- GitHub: Backend | Frontend

HealCode Telegram – Developer Error Auto-Fix Integration

2026

- Developed an asynchronous **Python Telegram bot** integrating developers with the HealCode error auto-fix service through repository registration and automated error-reporting workflows.
- Implemented **SQLite persistence with aiosqlite** for Telegram identities, chat IDs, repository mappings and HealCode tokens, including migration support for legacy user data.
- Built a secure repository setup flow supporting **GitHub/GitLab HTTPS URL validation**, branch configuration and automatic HealCode token generation.
- Implemented token lifecycle operations including creation, lookup, deletion and chat-based repository/token mapping for asynchronous error notifications.
- Designed the integration to restore authenticated client sessions and handle expired credentials without interrupting the Telegram bot workflow.
- Used **Python, python-telegram-bot, aiosqlite, REST APIs, Git and environment-based configuration** to build an automation-focused developer tool.
